

Vulnerability Management

Close the gaps that expose your business to risk

From coding errors to improper configurations, vulnerabilities pose a critical risk to your business. We help you detect, prioritize, and remediate vulnerabilities effectively.

Most companies scan for vulnerabilities. But scans alone do not eliminate the issues or reduce your risk; they simply identify the vulnerabilities – and often in large numbers.

Not all vulnerabilities pose risk to your business, but in order to know which ones do, you'll need to identify and prioritize the business-critical systems and software in your environment. Remediation efforts, including software patches and configuration changes, must be identified, tested, and deployed. And to be effective, all of these efforts need to be ongoing, which can easily overwhelm already-stretched internal resources.

SilverSky Vulnerability Management takes the complexity out of detecting, prioritizing, and remediating issues in your environment. We deliver the skilled resources, processes, and technology needed to manage the full vulnerability life cycle – helping you find and fix potential exposures before they can be exploited. **With SilverSky, continuous risk-based vulnerability management is achievable – with less burden on your internal team.**

Full Life-Cycle Management

-  Proactive Vulnerability Scanning
-  Risk-based Prioritization of Gaps
-  Guided Remediation
-  Validation Scans
-  Compliance Support
-  Auditable Change Management
-  Automated Reporting

SilverSky Vulnerability Management

Real-Time Visibility, Continuous Risk Management

SilverSky Vulnerability Management delivers unparalleled, continuous visibility into vulnerabilities in your environment that can expose your organization to risk. These include unpatched software, coding issues, and improper system configurations.

A managed service provider, SilverSky takes the complexity out of full life-cycle vulnerability management, from the discovery of business-critical assets; to issue detection, risk-based remediation, and validation; to reporting.

Our integrated platform combines leading technologies, automated tools, and the latest threat intelligence to allow our analysts to spot potential exposures and weaknesses. We use a risk-based approach to prioritize Identified issues based on the degree of risk they pose to your business. Our experts guide you through issue remediation, which can include configuration changes and patches, then perform validation scans to verify remediation success. Automated reports demonstrate the risk management process for auditors and executives.

We close the door on risk while you focus on your business

Detect

Our analysts run scans regularly to identify potential vulnerabilities in your environment.

Prioritize

Utilizing a risk-based approach, we prioritize remediation findings by device criticality.

Remediate and Verify

We oversee and guide remediation on your systems and perform validation scans to confirm success.

SilverSky Vulnerability Management helps you find – and close – business-critical gaps that expose your organization to risk.

Reduce your attack surface.
